

Polymeric SPE

VertiPak™ HCP-WC

Sample Extraction

- VertiPak™ HCP-WC SPE is Polyamide-Divinylbenzene Copolymer-Carboxypropyl, (PA-DVBC) mixed-mode polymeric sorbent offering both strong reversed phase interaction and weak cation-exchange interaction with interference-free extraction, compatibility with LC-MS or GC-MS
- Exhibits very high binding capacity over mixed-mode silica-based sorbent, up to 30% of sorbent weight allowing larger sample loads or a smaller sorbent bed resulting in high, reproducible recoveries and less solvent usage
- Exhibits excellent mass transfer and mechanical strength for basic polar compounds in an aqueous sample or a biological fluid sample without base modifiers
- Typical applications include basic drugs and metabolites from biological fluids, environmental pollutants from water, drugs of abuse and metabolites from urine e.g. amphetamine, methamphetamine, opiate, barbiturate, cocaine, THC
- Tube format is available in 4 tube sizes
- Tubes are packaged in zip sealing bag protective from moisture and light
- Includes Certificate of Analysis

Chemical structure

VertiPak™ HCP-WC (Polyamide-Divinylbenzene Copolymer-Carboxypropyl, PA-DVBC)

Specifications

Base	HCP-WC (Polyamide-Divinylbenzene Copolymer-Carboxypropyl, PA-DVBC)
Particle Size (µm)	30-50
Pore Size (Å)	80-90
Surface Area (m ² /g)	700-800
Carbon Load (%)	-
Endcap	No
pH Stability	1-14
